## Manlift Operator Certification Vancouver

Manlift Operator Certification Vancouver - Our scissor platform and aerial lift training and certification empowers participants with a general understanding and knowledge of the safe and efficient utilization of "Power Operated Mobile Work Platforms," under all of the existing regulations in the industry. Upon successful completion of training, the participants will be able to understand and recognize particular safety and health related dangers associated with making use of aerial and scissor lifts.

There are a variety of affiliated locations within your district providing Manlift Operator Certification Programs. Trainees are provided with in-depth instruction on safe operation and regulations along with extensive hands-on training. The skill level and knowledge of each individual training is assessed and individuals who could demonstrate a satisfactory level of operational competence will be given employee documentation and Operator Certification cards.

Theory Training
The trainer would help the one training through a review of the theory training utilizing various visual aids. The one training would work out of a workbook that covers all the necessary regulations. Other topics such as different equipment types including different sizes and associated applications, safe operating measures, pre-use inspections and general work place safety are explored individually.

Theory Evaluation
The Theory Evaluation starts with a written exam based upon the concepts covered in the operator's reference instruction manual. These tests are graded and returned to the ones training. Afterward the exams are reviewed to guarantee understanding and a minimum score of 70 percent is considered necessary in order to pass this portion of the training.

Practical Training
The hands-on portion of the course is covered in the practical training. Here, trainees are shown the safe operating measures, the shutdown and parking procedures and the pre-use inspection procedures. Every trainee has the chance to operate the machinery and practice the skills they learned throughout Theory Training under the helpful eye of the program trainer in an environment that is safety controlled.

Practical Evaluation
The Practical Evaluation is where the trainees are evaluated to assure they have reached a minimum level of skill. The trainees are then evaluated on an individual basis using the machine in a reasonably challenging course environment. As soon as the evaluation is finished, the trainees are de-briefed and given the opportunity to address whichever problems they might have regarding whatever part of the course. Each employer of a successful trainee would be sent the official documents and records soon after the course has been finished.
