

## **Forklift Training Program Vancouver**

Forklift Training Program Vancouver - The forklift is a common powered industrial vehicle which is in wide use today. They are occasionally called hi los, lift trucks or jitneys. A departments store will use the forklift in order to unload and load merchandise, whilst warehouses will utilize them to stack materials and products. And grocery stores use small models to drop stock in the aisles. Whether loading material at a construction site or transporting lumber at a sawmill, forklift operators are needed to be trained correctly and licensed. The main concern should be on pedestrian and worker safety. This forklift training course teaches the health and safety rules governing forklifts in order to guarantee their safe and efficient utilization.

### **Forklift Training Program Safety Tips:**

Right training ensures that operators of forklifts are able to maintain control of the forklift throughout tilting, traveling and lifting. Just qualified operators must operate a forklift.

When the forklift is in use; hands, head, arms, feet and legs must be kept in the forklift. Forklift forks should be kept low to the ground while being slightly tilted back. Observe traffic signs that are posted. Honk the horn and decrease speed when taking a corner. If the vision of the driver is blocked by the load, slowly drive backwards. Pre-check the ground for potential dangers, like objects, oily or wet spots, rough patches, holes, vehicles and people. Avoid sudden stops.

If pedestrians pass across the vehicle or moves into a blind spot, the forklift should be stopped, the load lowered, waiting until the way is clear. If a load is being transported on an incline, the forks must be pointed uphill with a load and downhill without a load. The lift truck must just be turned around when on level ground.

Safety tips when steering - Never turn the steering wheel sharply when traveling fast. Turn making use of the back wheels and support the load by the front wheels. A truck that is overloaded will be difficult to steer. Adhere to load limitations. Never add a counterweight in order to improve steering.

Safety guidelines while loading - The forklift's recommended load capacities should be adhered to; the information could be found on the data plate. Always make certain that the load is placed based on the recommended load centre. The forklift will remain stable as long as the load is kept close to the front wheels.

The forklift mast must be in an upright position before inserting the fork into a pallet. Before inserting the fork, level it.
